

Benchmarks

EVIDENCE · FROZEN AGGREGATES ONLY

Benchmarks, explained

These are engineering and retrospective offline benchmarks. They are not clinical validation, FDA clearance, or proof of outcome improvement.

HOW TO USE THIS PAGE

1. Start with Challenge 2019 primary window_m12_p6 metrics.
2. Treat legacy grace $\leq$ 6h holdout as sensitivity analysis only.
3. Use Investor demo for episode arbitration + chaos at demo scale.
4. Treat stewardship / uncertainty / MIMIC cards as under evaluation unless the claims matrix says demonstrated.
5. Every card lists caveats — read those before quoting externally.

Benchmark cards

Expand a card for metrics, caveats, and how to read them

Locked retrospective benchmark

DEMONSTRATED

PhysioNet Challenge 2019 — sepsis alert operating point

Offline replay of Curie SOFA + shared governance against Challenge SepsisLabel. Tunes on setA, freezes knobs, reports holdout on setB.

Synthetic reliability demo

DEMONSTRATED

Investor demo — multi-signal → one episode

Scripted multi-indicator sequence merged into one patient episode with chaos checks (duplicate / out-of-order / restart identity).

Methods pins + claim tiers

DEMONSTRATED

Manuscript reproducibility package (CURIE-

020)

Frozen reproducibility manifest that pins protocol/operating-point/Challenge hashes and separates retrospective detection vs unproven outcomes.

Offline governance analytics

UNDER EVALUATION

Alert stewardship — feedback classification (CURIE-024)

Classifies acknowledgement/dismissal text into a taxonomy and proposes offline experiments. Never mutates live rules or thresholds.

Passive retrospective study

UNDER EVALUATION

Uncertainty-band context assistant (CURIE-025)

When deterministic evidence is borderline, a grounded assistant may add context. It must not suppress or escalate alerts.

Protocol + demo schema — not Stage B results

UNDER EVALUATION

MIMIC-IV governance study schema (Stage B prep)

Frozen protocol and operating-point schema for a future MIMIC-IV clinical retrospective under DUA. Current numbers may be schema/demo scale only.
